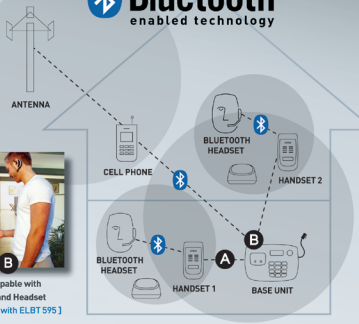
THE TECHNOLOGY

Bluetooth® enabled technology

wireless communication for your home



A

Bluetooth Capable with Headset Only [Compatible with ELBT 585 and ELX 500]

B

Bluetooth Capable with Cell Phone* and Headset [Compatible with ELBT 595]

How Does Bluetooth Work?

Bluetooth technology has been incorporated into this phone to make it easy to communicate with either a bluetooth enabled cell phone and/or wireless headset. You don't even have to think about it. Bluetooth doesn't require you to do anything special to make it work. The devices find each other and strike up a conversation without any user input at all. This makes it easy to network, transmit data and control other bluetooth enabled devices. Now you can tap into your cell phone minutes to take advantage of free long distance* or just go hands-free using your land line for crystal-clear communications anywhere in the house.

BONUS FEATURES

CellLink™
REQUIRES BLUETOOTH ENABLED CELL PHONE*

Select your cordless land line or your cellular phone* when making calls to take advantage of your long distance minutes (only applies to the ELBT 595).

DirectLink™
TWO-WAY RADIO CONVERSATION

No matter where you go, directly link two or more of your handsets for two-way conversations away from the house.

This phone is compatible with Uniden's 5.8 GHz Digital Handsets in the CLX 400 and the TRU 800 Series.
